Actuarial

# Salary Survey 

## December 1995

## American Academy of Actuaries

The American Academy of Actuaries is the public policy organization for actuaries of all specialties within the United States. In addition to setting qualification standards and standards of actuarial practice, a major purpose of the Academy is to act as the public information organization for the profession.

Academy committees regularly prepare testimony for Congress, provide information to con-
gressional staff and senior federal policy makers, comment on proposed federal regulations, and work closely with state officials on issues related to insurance.

This survey was prepared by the Academy Committee on Actuarial Public Service, with much assistance from Harry Richardson and David Rivera. The committee is charged with encouraging and promoting the importance of public sector employment for actuaries.

# Executive Summary 

Background

The Committee on Actuarial Public Service of the American Academy of Actuaries [Academy] conducted a compensation survey to provide the public sector with information on private sector actuarial positions. This report summarizes the results of that survey.

The committee is mindful that antitrust law prohibits explicitly or implicitly agreeing to (1) fix salaries (or salary ranges); (2) restrict competition; (3) create monopolies; or (4) boycott providers, customers, or other entities. The committee will scrupulously avoid any actions that would constitute such conduct and cautions users of the survey to do likewise. The survey, however, will provide data to individuals, not for any concert of action, but for their individual information and use. M ost importantly, the data will inform government agencies of the salary ranges that will help attract and retain highly qualified, competitive professionals.

## Scope of Survey

The Academy received the name and address of every tenth member of the Academy from the Society of Actuaries as listed in their database. The randomly selected members, $1,030 \mathrm{in}$ all, were sent a questionnaire (see pages 21-22) relating to calendar year 1993 salaries, and were encouraged to distribute copies of the survey to actuaries who were not Academy members or had not yet attained Associate status. The survey defined salary as cash compensation including bonuses paid in 1993, but not including deferred compensation. The Academy received a total of 564 responses, 79 of which came from actuaries who were not members of the Academy.

Because questionnaires were distributed within offices, some of the respondents were not among the 1,030 recipients of the survey. Thus, this survey does not include an entirely random sample of actuaries.

## For mat of the Presentation of Results

The results are presented in the form of tables and charts. Salaries are distributed by professional status, by the broad field of the employer (insurance, consultant, government, and others), by professional specialty (health, pension, life, casualty, financial, and others), age, years of actuarial experience, compensation, number of employees supervised, hours worked, and geographic location.

The charts show the straight-line least squares fit to the data to make reading and interpretation more manageable. The charts in the report are restricted to data that had at least 49 responses for each category, unless otherwise noted.

## Summary of Results

The survey found that the mean annual compensation for respondents was $\$ 99,500$ and the median $\$ 86,000$.

The tables show that:

- Compensation is highly correlated with years of experience for all professional specialties (Table 1). H ealth, pension, life, and casualty actuaries' salaries are fairly close for approximately the first 20 years of their careers. Actuaries with 10 years of experience in all four practice areas had average compensation in the $\$ 70,000$ range. As experience increased, the life actuaries started to trail the other categories. The financial actuaries were lightly represented in our survey (29 respondents).
- Members of the Conference of Consulting Actuaries (CCA) had higher salaries than members of the other organizations, especially through 30 years of service (Table 2). The salaries for members of the American Society of Pension Actuaries (ASPA) were below the other organizations through 20 years of service. H owever, theCCA and ASPA data were sparse. Many actuaries retain multiple memberships and are reported in two or more categories (Table 7).
- Consulting actuaries earn more than actuaries who work for insurance companies at all levels of expe rience(Table 3).
- Actuaries working in high cost-of-living areas have higher salaries than those in low cost-of-living areas (Table 4).
- Compensation is strongly correlated with hours worked for all specialties (Table 5).
-Theincomes of fellows exceed that of associates at all points of experience (Table 6).

## Findings

Professional Specialty: Compensation for Health, Pension,Life,Casualty, Financial Actuaries by Years of Full-Time Actuarial Experience: The following table and chart compare the annual compensation of the different professional specialties (health, pension, life, casualty, and financial) by years of full-time actuarial experience. Overall, salaries do not diverge much by professional specialty. The chart demonstrates that life actuaries with little full-time actuarial experience earn more than their health, pension, and casualty counterparts with the same level of experience. However, as years of actuarial experience accumulate, life actuaries move from the most highly compensated to the least highly compensated. H ealth actuaries, on the other hand, begin their careers as one of the least compensated groups. As expe rience accumulates, though, health actuaries receive a rapid increase in compensation, eventually becoming the most highly compensated group. Pension actuaries consistently are the highest or next to the highest compensated group. Casualty actuaries are the lowest compensated group until they have approximately 15 years of full-time actuarial experience. At that point, life actuaries become the least compensated group.

Table 1. Professional Specialty: Compensation for Health, Pension, Life, Casualty, Financial Actuaries by Years of Full-Time Actuarial Experience

|  | Health | Pension | Life | Casualty | Financial $^{1}$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Number of Respondents | 106 | 128 | 149 | 123 | 29 |
| Mean Compensation | $\$ 101,000$ | $\$ 112,700$ | $\$ 99,800$ | $\$ 80,200$ | $\$ 98,900$ |
| 25th Percentile | $\$ 60,000$ | $\$ 69,500$ | $\$ 58,000$ | $\$ 44,000$ | $\$ 52,500$ |

${ }^{1}$ Financial actuaries were not included in the chart on the following page due to an insufficient number of responses.

## CHAKI 1

${ }^{230 k}$ Professional Speaialty: Compensation for Health, Pension, Life, Casualty Actuaries

Professional Organizations: Compensation for Members of the AAA, SOA, EAs, CAS, ASPA, CCA by Years of Full-Time Actuarial Experience: The following table and chart compare the compensation of actuaries in different professional organizations by years of full-time actuarial experience. According to the survey, members of the C onference of Consulting Actuaries are more highly compensated than members of other professional organizations. The gap closes as service increases, and the compensation for CCA members is eventually surpassed; first by members of the American Society of Pension Actuaries, shortly thereafter by enrolled actuaries, and finally by members of the Society of Actuaries. Members of ASPA begin as the least compensated group, but eventually rise to become the highest compensated group. Meanwhile, members of the American Academy of Actuaries begin as the second highest compensated group, but as years of full-time experience accumulate, members of theAcademy become the least compensated group. Salaries of Casualty Actuarial Society members are consistently the lowest. It is important to note that many of the actuaries sur veyed retain multiple memberships and that there are relatively few observations for ASPA and theCCA.

Table 2. Professional Organizations: Compensation for Members of the AAA, SOA, EAs, CAS, ASPA, CCA by Years of Full-time Actuarial Experience

|  | AAA | SOA | EA | CAS | ASPA | CCA |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: |
| Number of Respondents | 483 | 382 | 132 | 111 | 23 | 36 |
| M ean Compensation | $\$ 108,900$ | $\$ 109,400$ | $\$ 120,700$ | $\$ 85,900$ | $\$ 110,880$ | $\$ 167,250$ |
| 25th Percentile | $\$ 67,000$ | $\$ 65,000$ | $\$ 77,800$ | $\$ 50,000$ | $\$ 75,000$ | $\$ 103,500$ |
| 50th Percentile | $\$ 92,000$ | $\$ 92,000$ | $\$ 98,500$ | $\$ 82,000$ | $\$ 103,000$ | $\$ 157,500$ |
| 75th Percentile | $\$ 127,000$ | $\$ 130,000$ | $\$ 151,000$ | $\$ 110,000$ | $\$ 137,000$ | $\$ 200,000$ |

CCA - Conference of Consulting Actuaries

## Employment Categories (Insurance, Consulting,Government and Others): Compensation by

 Years of Full-Time Actuarial Experience: The following table and chart show compensation by years of full-time actuarial experience for employees of insurance and consulting companies. The chart demonstrates that actuaries employed by consulting firms consistently receive higher compensation than actuaries employed by insurance companies.Table 3. Employment Categories (Insurance, Consulting, Government and Others): Compensation by Years of FullTime Actuarial Experience

|  | Insurance | Consulting | Government $^{1}$ | Others $^{1}$ |
| :--- | :---: | :---: | :---: | ---: |
| Number of Respondents | 346 | 181 | 19 | 14 |
| M ean Compensation | $\$ 89,500$ | $\$ 120,100$ | $\$ 64,400$ | $\$ 128,100$ |
| 25th Percentile | $\$ 53,000$ | $\$ 72,000$ | $\$ 30,000$ | $\$ 72,000$ |
| 50th Percentile | $\$ 79,800$ | $\$ 98,000$ | $\$ 65,800$ | $\$ 116,800$ |
| 75th Percentile | $\$ 110,000$ | $\$ 150,000$ | $\$ 80,500$ | $\$ 175,000$ |

[^0]

Geographic Locality (High, Mid,Low Cost-of-LivingAreas): Compensation by Years of Full-Time Actuarial Experience: The following table and chart show compensation for actuaries in geographic localities with high, mid, and low cost-of-living areas, by full-time actuarial experience (a list of cities included in high/mid/low cost-of-living areas is provided on page 23). The Places Rated Almanac" was used to divide cities that were listed by survey respondents as their area of employment into three categories: high, mid, and low cost-of-living areas. As would be expected, the chart indicates that actuaries working in the highest cost-of-living areas receive the highest compensation. They are followed by actuaries working in the next highest cost-of-living areas, and then those in the lowest cost-of-living areas.

Table 4. Geographic Locality (High, Mid, Low Cost-of-Living Areas): Compensation by Years of Full-Time Actuarial Experience

|  | Cost of Living Areas |  |  |
| :--- | :---: | :---: | :---: |
|  | High | Mid | Low |

| M ean Compensation | $\$ 105,600$ | $\$ 99,800$ | $\$ 90,400$ |
| 25th Percentile | $\$ 55,500$ | $\$ 60,000$ | $\$ 57,000$ |
| 50th Percentile | $\$ 92,800$ | $\$ 82,500$ | $\$ 75,000$ |
| 75th Percentile | $\$ 135,000$ | $\$ 112,000$ | $\$ 112,000$ |

Professional Specialty: Compensation for Health, Pension, Life, Casualty, and Financial Actuaries, by Average Number of H ours Worked Per Week: The chart on the next page shows compensation for health, pension, life and casualty actuaries by average number of hours worked per week in 1993. The chart indicates growth in all four practice areas, with the sharpest increase in the health practice area. Health actuaries who work over 60 hours a week are the most highly compensated, followed by pension, life, and casualty, respectively.

Table 5. Professional Specialty (Health, Pension, Life, Casualty, Financial Actuaries):
Average Number of Hours W orked Per Week

| 75th Percentile | 50 | 50 | 48 | 50 | 48 |

${ }^{1}$ Financial actuaries were not included in the chart on the following page due to an insufficient number of responses.

Professional Organizations: Compensation for SOA Associates,CAS Associates,SOA Fellows, and CAS Fellows by Age: The following table and chart show compensation by age on June 1, 1994 for SOA and CAS fellows and associates. In their youth, SOA and CAS fellows start out roughly together in terms of compensation. However, SOA fellows receive significantly higher compensation as they get older. Likewise, SOA and CAS associates start out together, but as they age, CAS associates receive significantly higher compensation than their SOA counterparts.

Table 6. Professional Organizations: Compensation for SOA Associates, CAS Associates, SOA Fellow s, and CAS Fellow s by Age ${ }^{1}$

|  | ASA | ACAS | FSA | FCAS | SOA | CAS |

ACAS - Casualty Actuarial Society-Associate
FSA - Society of Actuaries-Fellow
FCAS - Casualty Accuarial Society-Fellow
SOA - Society of Actuaries
CAS - Casualty Actuarial Society

Profile of Respondents by Professional Organization: The following table is a profile of respondents by professional organization. The first column indicates the number of respondents that belong to different combinations of professional organizations. For example, the number " 5 " in the first column, first row indicates that five respondents are members of the American Academy of Actuaries (AAA) and belong to no other organizations. The first column, sixth row indicates that there were 163 respondents that are both members of the AAA and Society of Actuaries Fellows.

## Key:

| Y | - Year(s) of Full-Time Actuarial Experience |
| :--- | :--- |
| CLS | - Least Squares Plot of Compensation |
| COM P AVG | - Average of Reported Compensation |
| COM P M ED | - Median of Reported Compensation |
| NO.OF OBS | -Number of Observations |

## The Data

Questionnaires were sent to 1,030 members of the American Academy of Actuaries (approximately 10\% of membership). A total of 564 surveys were returned from eighty-six localities.

Employment Categories were marked as follows:

| Insurance | 349 or $62 \%$ |
| :--- | :--- |
| Consulting | 182 or $32 \%$ |
| Government | 19 or $3 \%$ |
| Other | 14 or $2 \%$ See attached for list of "Other Employment Categories" |

Professional Specialties were marked as follows:
Health $\quad 107$ or 19\%

Pension $\quad 129$ or $23 \%$
Life $\quad 149$ or $26 \%$
Casualty $\quad 124$ or $22 \%$
Financial 29 or 5\%
Other 26 or 5\% See attached for list of "Other Professional Specialties"

Professional Organizations were represented by the resp ondents as follows:
American Academy of Actuaries 485
Society of Actuaries (total) 384

Associate 136
Fellow 246
Enrolled Actuary 133
Casualty Actuarial Society (total) 111
Associate 35
Fellow 51
American Society of Pension Actuaries 23
Conference of Consulting Actuaries 36
Other (includes those with no memberships)

55 See attached list for "Other Professional Organizations"

A total of 79 respondents were not members of the American Academy of Actuaries. Of the 79, 15 were Society of Actuary (SOA) members, 26 wereCasualty Actuary Society (CAS) members and the rest belonged to other organizations.

There were 136 SOA associates and 246 SOA fellows. In addition, eight respondents indicated SOA credit hours under 200 (pre-associate) but no SOA membership. Two other respondents indicated SOA membership but were neither associates nor fellows. Neither had any SOA credit hours.

A total of 51 fellows and 35 associates in theCasualty Actuarial Society responded. Of the 35 associates, all had passed between seven and nine CAS exams. In addition, six CAS members had passed between seven and nine exams, but were neither associates nor fellows. It seems that these six members could have been marked as associates. Additionally, there were 19 CAS members with between one and six CAS exams passed. Finally, there were 14 respondents who had passed between one and five casualty exams, but were not members of theCAS.

Four respondents failed to indicate any full-time actuarial exp erience. The average years of experience was 15 and the median was 14 (for those responding to the question).

Three resp ondents failed to report any cash compensation in 1993. One respondent reported earnings of $\$ 80$ million in 1993 (this number was set to zero and ignored in compensation tables and charts). The mean annual compensation was $\$ 99,500$ and the median $\$ 86,000$.

Three hundred ninety-two respondents reported supervising at least one person in 1993. The average number supervised was 18 and the median 5 . Eight respondents supervised 200 or more people.

Eight respondents failed to report any hours worked in 1993. The mean and median hours worked per week was 45.

One person failed to report age. The average age was 40 and the median 38.
Some adjustments were made to the data. If a range of numbers was given instead of the specific number requested, for example, the midpoint was recorded (hours worked 40-50, record 45). If more than one employment category or professional specialty was selected and the selection could not be resolved, the respondent was put in "Other." For an employment location near a metropolitan area, the individual was placed in that metropolitan area. For example, an individual employed in Newark, N.J. was included in New York. If "member SOA" was not marked, but the individual was listed as a fellow or associate in the SOA, he or she was included as a member of the SOA. The same procedure was followed for CAS members.

Of the 19 government actuaries that responded, 12 were pension actuaries from the New York City area. Their mean annual compensation, including one supervisor, was $\$ 63,617$. There were 20 non-government pension actuaries in the New York City vicinity. The combined mean annual compensation of government and non-government pension actuaries in the New York City area ( 32 respondents) was $\$ 87,749$. Because of the small number of actuaries involved, this figure may not be relevant.

Counts for each of the 86 respondent localities were recorded. Data was grouped into six geographical areas with the West being the region with the highest compensation and the Northeast/M id-Atlantic being the region lowest compensation.

Additionally, cities were grouped into high, medium, and low cost-of-living areas based on the Places Rated Almanac. Average annual compensation for the three areas was $\$ 105,600, \$ 99,800, \$ 90,400$ respectively, and \$99,500 overall.

## Survey of Actuarial Personnel

The following confidential survey is conducted by the American Academy of Actuaries. Your response, not later than June 1, 1994, is appreciated.
